WANTED 2000 AMBITIOUS HIGH SCHOOL GRADUATES!

To buy Duane Lyon's new text book and reference manual entitled

"BASIC METRICAL PHOTOGRAMMETRY"

This easy-to-read text will give you *ALL* the basic principles of metrical photogrammetry in one volume. It contains the following nine self-explanatory chapters: Introduction, Stereoscopy, Basic Theory, Effect of Errors, Analytical Geometry, Instruments, Techniques, History and Nomenclature. Numerous step-by-step procedures and computation forms are provided for various methods of tilt determination, elevation determination, model orientation, rectification, etc. Explains nature of image displacements, resection, intersection, scale, parallax, elements of orientation, transformation formulas, etc. Describes the design and construction of the American and European stereo plotters and photo rectifiers. This book of 500 pages and 240 illustrations is outstanding in terms of completeness, economy, readability and practical utility in the classroom or office. In writing this book the author has been guided by his experience of 20 years as a photogrammetrist with the U. S. government, and as an occasional teacher of photogrammetry at Washington University.

Printed by photo lithography from a typewritten text with a paper cover and a sewn binding. Orders, accompanied by payment (\$4.00 per copy), should be sent to Duane Lyon, P.O. Box 492, Arsenal Station, St. Louis 18, Missouri. Satisfaction guaranteed or money refunded. Incidentally, why not ask your library to order a copy also?
