

# The American Society for Photogrammetry and Remote Sensing

**T**HE American Society for Photogrammetry and Remote Sensing, founded in 1934, has given increasing service to the scientific community and the nation through development of the art and science of photogrammetry and the remote sensing. Five classes of members constitute our Society: Honorary Members who stand pre-eminent, having rendered outstanding service to the Society and the profession; Active Members—those from whom the Society draws its officers, directors, and committees; Student Members—a special class of Members established to assure a continuing flow of scientific capability in the field of photogrammetry and remote sensing; Sustaining Members—those individuals and commercial organizations who desire to render monetary support to the Society; and Emeritus (life) Members who have maintained continuous membership for 25 years and have reached the age of 65.

## SCOPE OF SOCIETY INTEREST

Photogrammetry and Remote Sensing has been defined by ASPRS as the "art, science and technology of obtaining reliable information about physical objects and the environment, through the process of recording, measuring and interpreting imagery and digital representations of energy patterns derived from non-contact sensor system." Within this definition, Photogrammetry includes the acquisition of imagery from conventional photographic systems, as well as from sensors utilizing other portions of the energy spectrum. Both the quantitative (metric) and qualitative (interpretative) aspects of image analysis are included. Thus, modern Photogrammetry is considered to embrace all the elements of image acquisition, mensuration, and interpretation which are called Remote Sensing.

## AIMS OF THE SOCIETY

The objective and business of the Society are "to advance scientific knowledge in the various disciplines of photogrammetry and remote sensing including but not limited to aerial surveying and mapping, photointerpretation, spatial information management, and the related sciences; to provide a means for the dissemination of information on photogrammetry and its related sciences; to encourage the exchange of ideas; to stimulate student interest and development in photogrammetry and its related sciences; to improve standards; and to uphold ethical principles."

## DISSEMINATION OF SCIENTIFIC INFORMATION

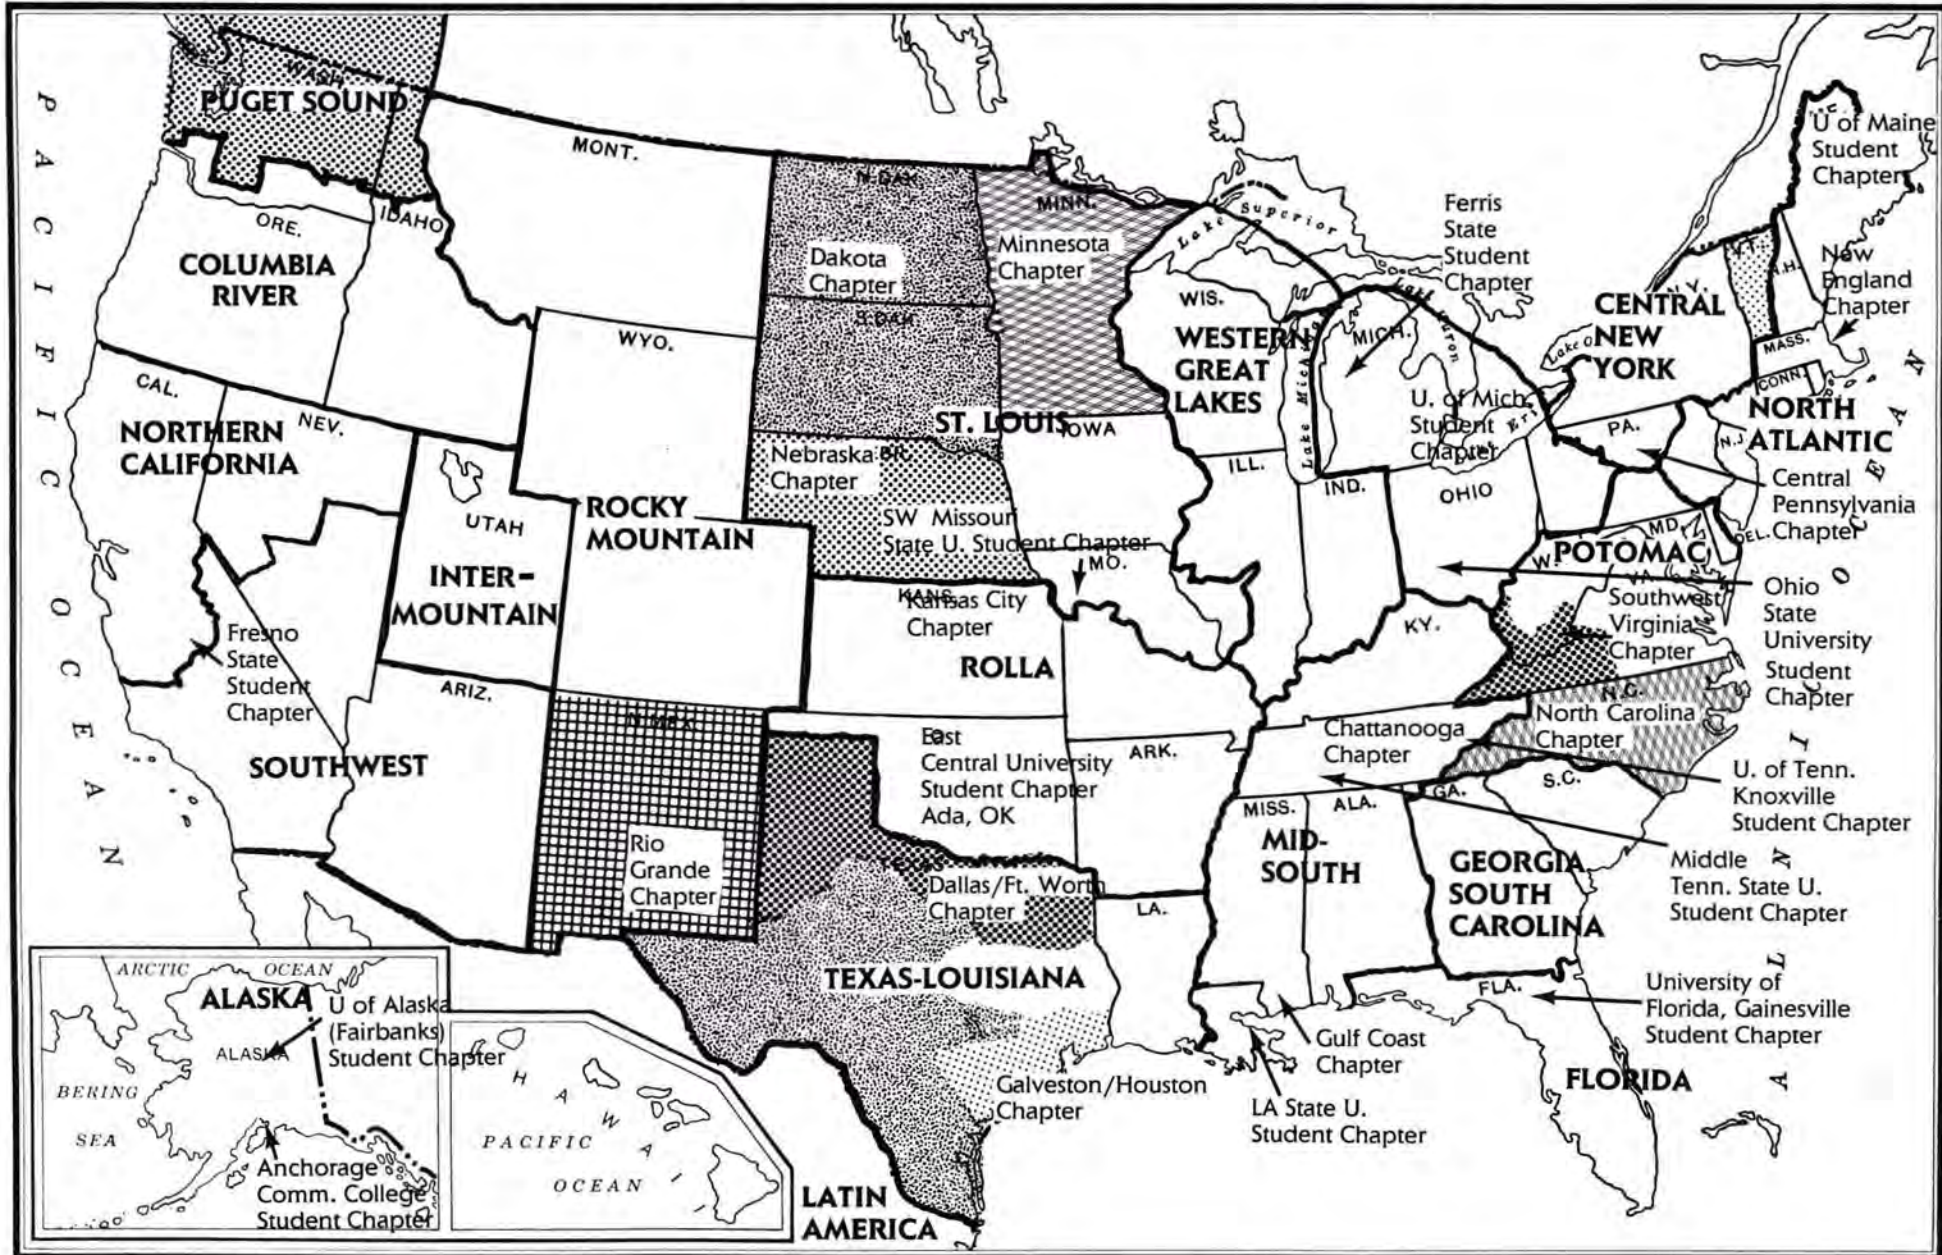

The Society disseminates scientific information through meetings and publications. Publications of the Society include our journal, *Photogrammetric Engineering & Remote Sensing*, published monthly and containing the *Society Newsletter*, and the basic manuals of the science, the *Manual of Photogrammetry*, the *Manual of Remote Sensing*, *The Multilingual Dictionary of Remote Sensing and Photogrammetry*, Technical Paper Volumes from technical meetings, Proceedings from workshops, and symposia, a complete index to the Journal and indexes to the Technical Paper Volumes.

In addition to its publications, the Society thrives, through local and national meetings, to disseminate knowledge of the science as rapidly and effectively as possible. The national Society is responsible for the development and presentation of the Annual and Fall Conventions. The Society is the U.S. National Member and an active Member of the International Society for Photogrammetry and Remote Sensing.

## GOVERNMENT OF THE SOCIETY

The government of the national Society is vested in its Board of Directors and its Officers; responsibility for the day-to-day management of Society affairs rests with the Executive Director and Secretary-Treasurer. The Society has established and supports a series of Committees which are responsible to the President. Their function is advisory; however, Committee Chairpersons may act for the President when directed to do so. The Society is subdivided geographically into 19 Regions, some of which have organized additional Chapters. Each of these regions selects its own officers and directors, and elects one member to the Board of Directors of the parent Society. The Society organization includes, to date, four Technical Divisions: Remote Sensing Applications Division, Primary Data Acquisition Division, Professional Practice Division, and Photogrammetric Applications Division. The purpose of these Divisions is to bring the Society closer to its members who are ordinarily specialists in a limited phase of the discipline. The Division Directors are members of the Board of Directors of the Society.
