REMOTE SENSING & NATURAL RESOURCE MANAGEMENT

Proceedings of the Fourth Forest Service Remote Sensing Applications Conference 6-11 April 1992

1992. 456 pp. \$90 (softcover); ASPRS Members \$45. Stock # 4532.

The Forest Service Remote Sensing Applications Conference provides an arena for resource managers to share information and learn about new technology and new applications that can help manage our nation's natural resources. The conference has continued to grow and expand to include more participants from forests and districts throughout the country, other government agencies, universities and private companies and organizations. This text contains the papers of the fourth such conference which was held in Orlando, Florida.

Topics include:

- ▶ Digital Image Analysis Techniques on an IBM Microcomputer for Measuring Soil Disturbance Following Timber Harvesting
- ▶ Applications of GPS/GIS for Fire Mapping in Everglades National Park
- ▶ Forest Species and Structure Analysis Using a Hyper-Spectral Scanner (AVIRIS) and Terrain Normalization Algorithms
- ▶ The Use of GPS, GIS, and Remote Sensing in a Stratified Forest Survey
- ▶ Three-Dimensional Terrain Visualization with a Real-Time Interface to a Photographic Stereomodel
- ▶ Real-Time Differential GPS: An Aerial Survey—Remote Sensing Application
- ▶ Aerial Video and Associated Technologies for Forest Assessments
